

HANDS

SOLUTION

Page 1 of 1

Puzzle 5

Something is afflicting one of the patient's hands. Fortunately, the other one seems fine, so your team can explore both *left* and *right* to identify how things have *changed* and work out how to draw up a plan for treatment.

Pair answers by swapping all occurrences of L and R and finding the resulting word on the other hand.

Each clue on the right contains an extra letter; read them in order of their paired word on the left.

"run away from" = fLee, which changes to fRee; cards dealt = hand. The answer is FREEHAND.
