

DOCTORS AGAINST SCOURGES OF HUMANITY: Unit 5

May 2013

COMPLETE THE CURE**FINAL ASSIGNMENT**

We are dispersing peony root extract in aircraft flyovers – even low concentrations are effective as a vaccine – but we determined it is *NOT A CURE!* We have reason to believe there is a way to modify the vaccine to make it into an actual cure – find out how before it's too late.

DETAILS:

We believe that the seven enclosed molecular fragments will, when assembled correctly and precisely, define pathways that suggest how we can turn the vaccine into a cure.

Hexes that have circles represent connection points, but we are not sure how they work.

Hexes that have thick colored borders are termination points of some kind.

Through the interlaced pathways, the activation mechanism runs in two directions.

To get things started on the right track, we think the key to the construction is what your previous solutions have in common.

Get on it!
